In 2006, AutoCAD went from 2 million to 8 million users in 5 years. The forecast for 2009 was 17.5 million users. The key growth drivers for 2010 are: AutoCAD 2010 was shipped on December 22, 2009, and is currently the most widely used commercial CAD program in the world. Major product milestones Customizable user interface In 1992, AutoCAD first shipped with a customized user interface. The original user interface was based on Gantt charts, and its design is described as: In 1992, the first mass-produced application with a customizable user interface was the FoxPro 1.0 Beta. The new interface was based on a general-purpose graphical user interface called Indigo, which allowed the user to customize the appearance and functionality of an application. In 1995, the application set the custom user interface as a major feature with the release of AutoCAD 95. AutoCAD 95 also introduced a feature called "Save", where customized interface states and settings can be saved to a file. In 1997, the company presented an enhanced version of the user interface. The new interface was based on a graphical user interface called "EDM", a.k.a. "EDM Plus". The EDM Plus user interface was originally called "EDM 2" and was

designed by the company's internal AutoCAD User Interface group. In 1997, AutoCAD introduced a feature called "EzView", which is a front-end that provides a combination of automatic and a user-editable presentation of technical data about drawings and files. National Public Radio (NPR) recently aired an interview with John Wayne Whyte, the Australian man who drove across the United States to raise money for breast cancer research. Whyte, who suffered from an affliction called familial adenomatous polyposis, or FAP, told the host of NPR's All Things Considered that his search for medical answers led him to the U.S. in hopes of finding treatments that may one day help women with the disease. "I was in desperate need of a cure," he said. "And I thought America was the place that could do that." The phrase "I thought America was the place that could do that" would have made the mouth of any politician flinch. But Whyte's statement revealed the depth of the sentiment among the American public about the power of this country. So here is a question: Do the right-wing activists working to politicize a natural disaster in the name of party advantage actually believe that? Or do they know the truth and just do it anyway? According to the latest Census figures, nearly one in three people in the U.S. lives in an area designated as "rural." It is easy to understand the need for political "savvy" organizations like the Tea Party movement to point to the suffering of the people of New Jersey and Florida and to paint it as the result of climate change. When Hurricane Sandy struck New York City last month, the Republican governor of New Jersey Chris Christie had just returned from a fund-raiser and then party event in Miami, Florida. His embrace of the "bipartisan" model for "resolving" the energy crisis is so well known that it scarcely needs citation. But when the flood waters receded and the National Weather Service announced the official numbers,
